(54) IMAGE FORMING DEVICE

(57)Abstract:

PURPOSE: To remarkably reduce power consumption when an operator leaves one's seat and to eliminate power source throwing operation required whenever an image processor is driven.

CONSTITUTION: When a human body 26 is detected by a human body detection means 27, a drive command signal is outputted, and a control voltage is supplied to a control means 13 by a state monitor mode transition means 23 to transite to a state monitor mode, and monitor information of a state monitor part 20 is monitored. Only when the monitor information is normal, the device is transited to a stand-by mode standing by an output of a drive voltage to the drive parts 3-8, 12 by a stand-by mode transition means 25 and driving drive parts 3-8, 12 when a command is received. When no drive command signal from the human body detection means 27 is outputted, a detection voltage is supplied to only the human body detection means 27 by an energy mode transition means 23, and the control voltage to the control means 13 is interrupted to be transited to an energy mode.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's

decision of rejection]
[Date of extinction of right]
